

SPRINT 4

Framework (Cloud deployment)

Date	08 November 2022
Team ID	PNT2022TMID38202
Project Name	Project - Gas Leakage Monitoring and Alerting System for Industries.

Cloud Deployment:

- On cloud, analyse and store the data and communicate wirelessly for further analysis is possible. Anyone can access the leakage data from anywhere using any Internet enabled device like PC, tablet or smart phone, and analyse it.
- The fire caused by gas leakage not only harms the owner but also people who are not far from the fire. From these problems, the authors make a design of cloud computing-based detection system of gas leak using a microcontroller NodeMCU Esp8266 that can provide notifications via smartphone in case of fire and automatically do the first treatment by turning on the exhaust. Notification sends via the smartphone appear not only when opening the application, but also when it does not open the application.

Code:

```
#include <ESP8266WiFi.h>

#include <PubSubClient.h>

WiFiClient wifiClient;

//Enter your network credentials below in ssid and password const
char* ssid = " ";
const char* password = " ";

//Provide your IBM IOT Platform credentials
#define ORG ""
```

```
#define DEVICE_TYPE ""
```

```
#define DEVICE_ID ""
```

```
#define TOKEN ""
```

```
char server[] = ORG ".messaging.internetofthings.ibmcloud.com"; char
```

```
publishTopic[] = "iot-2/evt/Data/fmt/json";
```

```
char topic[] = "iot-2/cmd/home/fmt/String"; // cmd REPRESENT command type AND COMMAND IS  
TEST OF FORMAT STRING char authMethod[] = "use-token-auth"; char token[] = TOKEN; char
```

```
clientId[] = "d:" ORG ":" DEVICE_TYPE ":" DEVICE_ID;
```

```
void callback(char* topic, byte* payload, unsigned int payloadLength); PubSubClient  
client(server, 1883, callback, wifiClient);
```

```
int publishInterval = 5000; // 30 seconds long
```

```
lastPublishMillis;
```

```
String data;
```

```
void setup()
```

```
{
```

```
    Serial.begin(9600);
```

```
    pinMode(D0, OUTPUT);
```

```
    wifiConnect();
```

```
    mqttConnect();
```

```
}
```

```
void loop() {
```

```
    if (millis() - lastPublishMillis > publishInterval)
```

```
{

    publishData();
    lastPublishMillis = millis();
}

if (!client.loop()) {
    mqttConnect();
}
}

void wifiConnect() {
    Serial.print("Connecting to "); Serial.print(ssid);
    WiFi.begin(ssid, password); while (WiFi.status()
    != WL_CONNECTED) {
        delay(500);
        Serial.print(".");

    }
    Serial.print("\nWiFi connected, IP address: "); Serial.println(WiFi.localIP());
}

void mqttConnect() {
